

BP-502

Unique Features

Toblerone

Made from synthetic thermorubber, this uniquely designed feature absorbs shocks and protects the case from abrasion, dirt, mud and standing water.

TST

Kata's state of the art protection combination for digital equipment.

Omega

Carrying system concealment compartment.

Many cases come with a carrying system concealment unit, which gives you rapid access to the harness and waist belt and allows easy repackaging when needed. The harness itself is ergonomically designed to sit comfortably on your shoulders. It has special padding and a zigzag shape to provide optimal weight distribution. A waist belt is provided for more stability and in the larger backpacks there's a fully padded 6 point, adjustable detachable hip belt.

Elements Cover

An emergency Elements Cover is included in many of our products to protect your case and equipment in inclement weather: black side out in rain or snow, and in sun reverse to silver for heat reflection.

Insertrolley compatible

Allows you to use the trolley separately or with several cases by sliding the trolley through the sleeve. You can detach the trolley if you want to store it and replace it if damaged. 4 extendable wheels for better stabilization.

Modi-Vers System compatible

This System allows you to create compartments that meet your requirements. The divider can be cut with scissors to any desired size. You can attach the newly cut divider to another divider or the walls of the bag with a special Velcro connector.

EPH System compatible

Ergonomic Photo System

A modular system that allows you to set the required configuration by attaching 1-3 KATA cases together.
