### IR6000 – Interface for PTT activation

This equipment activates the PTT (push-to-talk) of the walkie Base Station (wireless RF) thru its contact closure. So we can activate the crosspoint between an user panel and the person that carries the walkie talkie (which is half-duplex). In the end, it remotely controls the base station to open the communication channel from an intercom user panel. When the user panel stops pressing the key, it allows the walkie user to speak.

It has two units high and 19" (full rack). With one port.
