
Remote Panel for 2x1 Emergency Switch

This remote panel allows easy control of ESW201 or ESW201-S emergency switch cards when fitted in a Microvideo 3U frame with control bus wiring. The panel allows the user to quickly to switch a card in any one of the twelve slots in the frame, it can also be disabled to prevent accidental operation.

Buttons

- Panel Enable Enables/disables control panel. The button is illuminated when the panel is enabled
- Buttons 1-12 Switches a card in slot 1-12 to input B, pressing the button again causes card to switch back to input A. Buttons are illuminated when a card is outputting input B, by the tally back from the card.

Communications

Communication via the rack and remote panel is via two cables with 25 way D-Type plugs. This cable can also provide power to the remote panel over short distances. If the panel is switched off or the GPI control cable is removed the switches will default to A.

Physical

- Size 1U rack mounting, 200mm deep
- Power Powered from Microvideo 3U rack. For distances over 5m, mains input available

Product Code

- REM-ESW Remote panel for controlling ESW201 or ESW201-S
