

Zoom remote Zoe-III

The third version of our zoom grip, Zoe-III, weighing in at less than 140g including cable and connector is one of the smallest and lightest zoom grips on the market. The experience won in over 1500 units of the versions I+II delivered was put into the design of the Zoe-III. Now, as then, the Zoe-III offers the usual functions of a zoom grip:

- Stepless Zoom Speed Adjustment
- Record Start/Stop Button
- Return Function
- Reversible Zoom Direction

Still three more essential parts were improved: the design was adjusted to the new Zoe-line with all its advantages: protection of the speed wheels, ergonomic shape of the rocker switch and better clamp.

The special shape of the rocker switch allows you to put your thumb at three different places: middle, right or left. In any situation, you will find a position for your finger where you can use the Zoe in a precise but comfortable way.

The zoom-switch housing is made of fibre glass reinforced polycarbonate, which makes the Zoe-III nearly unbreakable. All of the buttons are protected from rainwater by a plastic protective layer.

The operating knobs are manufactured of plastic and stand out from the housing. They are mobile and give a clear feedback whether the respective function was operated or not. The Record button has a different shape than the Return button, which allows easy manipulation without looking.

The shape of the housing protects the speed wheels and avoids accidental repositioning of the pre-adjustment.

The new clamp goes on any tripod arm or tube up to 34mm of diameter. It is made with bigger screws than the previous version, so that it has become much quicker to close or to open. Thus the Zoe-III replaces the „Steadicam-version“ of the Zoe-broadcast.

ZOE-III can be delivered in three different configurations:

- Zoe-8C for Canon Lenses
- Zoe-8F for Fujinon Professional Lenses
- Zoe-12F for Fujinon Broadcast Lenses

For use with a crane, extension cables in lengths of 3,5 m up to 60 m are available.
